DC-SBM AVA — ε=0.02 vs ε=0.15 (all policies pooled, n=416 per ε)
Left: fraction of runs with all three species present over time · Right: mean occupancy per species (total / 3), split by final presence
Survival fraction over time
Fraction of runs with all three species present
Game turn
ε=0.02 (75.7% at turn 4,980)
ε=0.15 (88.0% at turn 4,980)
ε=0.15 advantage
Mean occupancy by ε and outcome
Mean occupancy per species (total / 3)
Game turn
ε=0.02 all present (n=315)
ε=0.02 species lost (n=101)
ε=0.15 all present (n=365)
ε=0.15 species lost (n=51)
